Subject: OECD question for JM Bureaux
Importance: High

Hi guys,

Ex. 5 Deliberative Process (DP)

Here is the excerpt:

Near-term

24. The following recommendations from the November 2018 joint meeting of the Expert Group on Integrated Approaches to Testing and Assessment and the OECD QSAR ToolBox Management Group could be implemented as a first step of developing “Good Computational Practices”:

- a. The QSAR Model Reporting Format (QMRF) can be used to document and describe the *in silico* model.
- b. A detailed description of how the model was run can be included in the Test Guideline to remove variability, expert judgement, and assure predictions are reproducible.
- c. The QSAR Prediction Reporting Format (QPRF) can be used to document the prediction resulting from *in silico* models.

Longer term

If you see anything else you think is concerning, let me know as well. Sorry for the usual quick turn around needed.

Regards,
